## Gold Detecting Made Easy - Key Gold Settings

Just set the Gold Mode and Ground Type to suit your detecting conditions and you're ready to go.

**Gold Mode** 

**High Yield** (default setting) (Typically  $\leq 0.1-50$  grams)

**General** (Typically 5–50 grams)

Extra Deep (Typically ≥50 grams)

**Ground Type** 

Norma

For soils that have lower levels of mineralization, this mode will maximize target response signals. If the detector is noisy over the ground then switch to Difficult. This is a great mode for deep cache hunting.

Difficult (default setting)

Goldfields typically have very mineralized soil. This mode handles these conditions, enabling you to detect in more locations with a minimum amount of false signals masking target responses.

Severe

Some locations have extreme levels of mineralization. This ground type, combined with High Yield gold mode, enables detecting in challenging conditions and previously undetectable areas.

## Zero Voltage Transmission

A QUANTUM LEAP in gold performance with breakthrough new technology from Bruce Candy.

ZVT technology goes to the next level for all serious gold prospectors, providing substantially improved depth.

## 19-inch Accessory Coil

Find More Gold – Deeper & Faster! The GPZ 19 Super-D coil maximizes the performance of your GPZ 7000 and gives a significant depth increase over the standard GPZ 14 coil for nuggets above 1 gram.

- Deeper Detection
- More Ground Coverage
- · Less Ground Noise
- Waterproof to 1 m (3 ft)
- · Super-D Coil Technology

(The GPZ 19 coil is an accessory and must be purchased separately from the GPZ 7000 detector)  $\,$
